

ANDROID · WORKS OFFLINE

Counter POS Fast food billing.

Bill in seconds. Know your real food cost by closing time.

Runs on **any Android phone or tablet**

No internet needed

AT THE COUNTER

Tap, take payment, print. New staff learn it in one shift.

IN THE KITCHEN

Order tickets print automatically. Ingredients come off stock by themselves.

FOR THE OWNER

Real margin, not a guess. Plus who discounted, voided and came up short.

WATCH IT WORK

Thirty seconds, no sales talk

These are recordings of the app running, not animations. Every figure on screen is the software doing the work.

BILLING

Built for a rush

Everything a busy counter does in the middle of a dinner rush, in as few taps as possible.

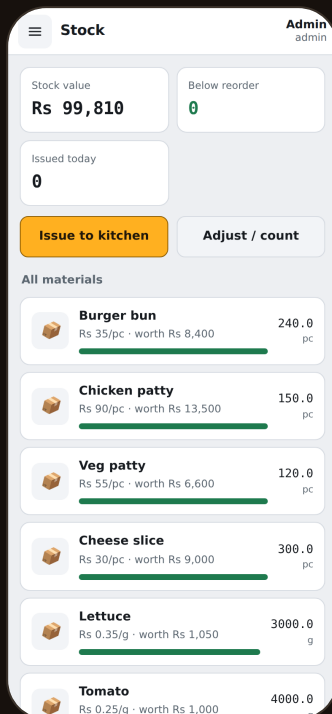

- ✓ **Categories and photos**
Tap a category, tap the item.
Pictures mean new staff stop asking.
- ✓ **Hold and retrieve bills**
Park an order as "Table 4" and pick it up again later.
- ✓ **Extras and choices**
Extra cheese, no onion, large drink, spice level — with a note for the kitchen.
- ✓ **Deals and combos**
One button for a full deal. The reports still see every item inside it.
- ✓ **Kitchen tickets**
KOT prints as the order is taken. No shouting across the counter.
- ✓ **Every way they pay**
Cash, card, Easypaisa, JazzCash, bank — or part cash and part card on one bill.

STOCK THAT LOOKS AFTER ITSELF

Every sale knows what it used

Tell it once that a burger is a bun, a patty and 18 grams of lettuce. From then on the stock moves on its own, and the margin is a fact instead of a feeling.

Raw material stays hidden

Cashiers see the menu. Flour, oil and patties never appear on the billing screen — they simply come off stock as things sell.

Issue and wastage

Record what goes to the kitchen, to staff meals or in the bin, so a shortfall looks like what it is instead of looking like theft.

Purchases update your cost

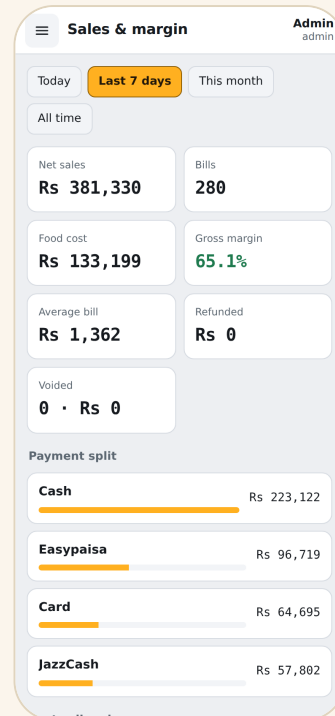

Enter a supplier bill and stock rises while the average cost of every material recalculates — so margin follows real prices.

NUMBERS YOU CAN ACT ON

Yesterday, in one screen

Not just what you sold. What it cost, what it earned, and which items are quietly carrying the shop.

- ✓ **Sales and gross margin**
Daily, weekly, monthly, all time.
- ✓ **Best sellers by contribution**
Ranked by what they actually earn you, not just how many went out.
- ✓ **Day-end report**
One printed slip with the whole day, including each cashier's drawer.
- ✓ **Straight into Excel**
Export any period for your accountant.

CONTROL

For when you are not standing there

Most losses at a fast food counter are small, repeated and hard to see. These make them visible.

Discount limits

Cashiers may take off only what you allow. Anything more needs a manager PIN, and the approval is recorded.

Voids need approval

No cashier can cancel their own sale. A manager PIN is required, the reason is saved, and the stock returns.

Drawer counted every shift

Open with a float, close by counting. The app says over or short on the spot, and keeps the history.

PRICING

Plain and final

COUNTER POS · WAZIRABAD

Counter POS licence

Rs 35,000

One Android device

80mm Bluetooth receipt printer	Rs 23,500
--------------------------------	-----------

Cash drawer	Rs 13,500
-------------	-----------

Online / cloud database	Rs 20,000 / year
-------------------------	------------------

----------------------------	------

Installation at your shop	Rs 5,000
---------------------------	----------

After-sale support	FREE
--------------------	------

First month

We set up your full menu, recipes and staff accounts before you start.

BEFORE YOU BUY

Things worth knowing

We would rather you hear these now than find them later.

- The licence covers one device. A second billing counter needs its own licence, and the two keep separate stock and reports unless you take the cloud option.
- Your data lives on your device. We will show you how to back it up — please do it weekly.
- Receipts print in English script. Urdu item names will not print on a thermal printer.
- You need a Bluetooth thermal printer, 58mm or 80mm, and Android 7 or newer.
